PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/786,914

Applicant(s)

NAKANO ET AL.

Examiner

Luz L. Alejandro

Art Unit

1792

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 November 2007.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/20/07 has been entered.

Reissue Applications

A) Declaration

The supplemental reissue oath/declaration filed on 1/27/06 is defective (see 37 CFR 1.175 and MPEP § 1414) because of the following: the signatures of all the inventors are missing.

Claims 1-23 are rejected as being based upon a defective reissue declaration under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1792

Claims 1, 6-7 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kagatsume et al., US 4,908,095.

Kagatsume et al. shows the invention as claimed including a plasma treatment equipment having a chamber 12 for performing plasma treatment, the chamber having a bottom wall and a side wall, the plasma treatment equipment comprising: a plasma excitation electrode 40 to which a power for plasma excitation is supplied, the plasma excitation electrode being provided in the chamber; and a susceptor electrode 20 that is opposed to the plasma excitation electrode provided in the chamber; the susceptor electrode being an electrode into which a high frequency electric current based on the power for plasma excitation flows after passing through a plasma space; the susceptor electrode disposed within the plasma chamber and comprising a generally planar shaped electrode portion oriented substantially parallel to the bottom wall of the plasma chamber; the susceptor electrode having the same DC potential as that of a chamber wall of the chamber; and wherein a side wall of the chamber and the susceptor electrode are AC shorted to each other by a conductive metal element 27 (see, for example, fig. 5, and its description).

With respect to claims 6-7, note tha in the apparatus of Kagatsume et al. the chamber wall and the susceptor electrode are shorted at a plurality of short points disposed approximately symmetrically with respect to a center of the susceptor electrode.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being obvious over Kagatsume et al., US 4,908,095.

Kagatsume et al. is applied as above but does not expressly disclose that the susceptor electrode and the chamber wall are shorted at a location shorter than 500 mm from a side wall of the chamber wall, the shorting is performed by a metal plate, and an angle formed between the metal plate and the bottom wall is less than 45 degrees. Regarding the particular shape of the shorting element, a prima facie case of obviousness exists because the particular shape of the shorting element is a matter of choice which a person of ordinary skill in the art would have found obvious absent

Art Unit: 1792

persuasive evidence that the particular configuration of the claimed container was significant. Concerning the shorting location and the angle between the metal plate and the bottom wall, a prima facie case of obviousness still exists because where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device absent the showing of unexpected results.

Claims 8, 13, and 22-23 are rejected under 35 U.S.C. 103(a) as being obvious over Kagatsume et al., US 4,908,095 in view of the Admitted Prior Art (APA).

Kagatsume et al. is applied as above but does not expressly disclose that susceptor electrode further comprises a shield provided in the chamber and disposed adjacent to the susceptor electrode. APA discloses a plasma treatment equipment comprising: a top electrode 4, a bottom electrode 8, and a susceptor electrode shield 12 (see, for example, figs. 12-16, and their descriptions). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the susceptor electrode of the plasma treatment equipment of Kagatsume et al. as to further comprise a shield in order to shield the susceptor electrode from the plasma and thereby protect the susceptor electrode and minimize contamination of the susceptor electrode.

With respect to claim 22, the particular shape of the shorting element, a prima facie case of obviousness exists because the particular shape of the shorting element is

Art Unit: 1792

a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular configuration of the claimed container was significant.

Claims 9, 11-12, and 14-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kagatsume et al., US 4,908,095 in view of the Admitted Prior Art (APA), as applied to claims 8, 13 and 22-23 above, and further in view of Kawakami et al., JP 06-333879.

Kagatsume et al. and the APA are applied as above but does not expressly disclose that the chamber wall of the chamber and the susceptor electrode shield are AC shorted to each other. Kawakami et al. discloses a plasma treatment equipment comprising: a plasma chamber wall, a susceptor electrode 8 disposed within the plasma chamber and comprising a generally planar shaped shield 12 disposed adjacent to the electrode portion; and wherein the bottom wall of the plasma chamber and the susceptor electrode and shield are AC shorted to each other by a conductive element 14 at a plurality of short points of the chamber wall which are disposed approximately symmetrically with respect to a center of the shield of the susceptor electrode (see, for example, figs 1-6 and their descriptions). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the apparatus of the APA as to further comprise a metal member connected between the susceptor electrode shield and the chamber wall in order to AC short the susceptor electrode/shield and the chamber wall from each other and thereby optimize the

Art Unit: 1792

apparatus and the processes performed within by effectively preventing discharge abnormalities and external noises.

Furthermore, Kagatsume et al., APA and Kawakami et al. are applied as above but do not expressly disclose that the susceptor electrode and the chamber wall are shorted at a location shorter than 500 mm from a side wall of the chamber wall, the shorting is performed by a metal plate, and an angle formed between the metal plate and the bottom wall is less than 45 degrees. Regarding the particular shape of the shorting element, a prima facie case of obviousness exists because the particular shape of the shorting element is a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular configuration of the claimed container was significant. Concerning the shorting location and the angle between the metal plate and the bottom wall, a prima facie case of obviousness still exists because where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device absent the showing of unexpected results.

Claims 1-23 are rejected under 35 U.S.C. 103(a) as being obvious over the Admitted Prior Art (APA) in view of Kawakami et al., JP 06-333879 or Sakai et al., JP 10-032171 or Kagatsume et al., US 4,908,095.

APA shows the invention substantially as claimed including a plasma treatment equipment having a chamber 60 for performing plasma treatment, the chamber having a bottom wall and a side wall 10, the plasma treatment equipment comprising: a plasma excitation electrode 4 to which a power for plasma excitation is supplied, the plasma excitation electrode being provided in the chamber; and a susceptor electrode 8 that is opposed to the plasma excitation electrode provided in the chamber; the susceptor electrode being an electrode into which a high frequency electric current based on the power for plasma excitation flows after passing through a plasma space; the susceptor electrode disposed within the plasma chamber and comprising a generally planar shaped electrode portion oriented substantially parallel to the bottom wall of the plasma chamber and further comprising a generally planar shaped shield 12 disposed adjacent to the electrode portion, the shield being located between the electrode portion and the bottom wall of the plasma chamber; the susceptor electrode and the shield of the susceptor electrode have the same DC potential as that of a chamber wall 10 of the chamber; (see, for example, figs. 12-16, and their descriptions).

APA does not expressly disclose that the chamber wall of the chamber and the susceptor electrode/shield are AC shorted to each other. Kawakami et al. discloses a plasma treatment equipment comprising: a plasma chamber wall, a susceptor electrode 8 disposed within the plasma chamber and comprising a generally planar shaped shield 12 disposed adjacent to the electrode portion; and wherein the bottom wall of the plasma chamber and the susceptor electrode/shield are AC shorted to each other by a conductive element 14 at a plurality of short points of the chamber wall which are

Art Unit: 1792

disposed approximately symmetrically with respect to a center of the shield of the susceptor electrode (see, for example, figs 1-6 and their descriptions). Additionally, Sakai et al. discloses a plasma treatment equipment comprising: a plasma chamber wall; a susceptor electrode (1/1a, 1b, 11) disposed within the plasma, wherein the bottom wall of the plasma chamber and the susceptor electrode are AC shorted to each other by a conductive element 12 at a plurality of short points of the chamber wall which are disposed approximately symmetrically with respect to a center of the susceptor electrode (see, for example, figs. 6-10 and their descriptions). Furthermore, Kagatsume et al. discloses a plasma treatment equipment comprising: a plasma chamber wall; a susceptor electrode 20 disposed within the plasma, wherein the bottom wall of the plasma chamber and the susceptor electrode are AC shorted to each other by a conductive element 27 at a plurality of short points of the chamber wall which are disposed approximately symmetrically with respect to a center of the susceptor electrode (see, for example, fig. 5 and its description). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the apparatus of the APA as to further comprise a metal member connected between the susceptor electrode/shield and the chamber wall in order to AC short the susceptor electrode/shield and the chamber wall from each other and thereby optimize the apparatus and the processes performed within by effectively preventing discharge abnormalities and external noises.

Furthermore and with respect to claims 2-5, 11-12, 15-16 and 20-22, APA, Kawakami et al., Sakai et al. and Kagatsume et al. do not expressly disclose that the

Art Unit: 1792

susceptor electrode and the chamber wall are shorted at a location shorter than 500 mm from a side wall of the chamber wall, the shorting is performed by a metal plate, and an angle formed between the metal plate and the bottom wall is less than 45 degrees. Regarding the particular shape of the shorting element, a prima facie case of obviousness exists because the particular shape of the shorting element is a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular configuration of the claimed container was significant. Concerning the shorting location and the angle between the metal plate and the bottom wall, a prima facie case of obviousness still exists because where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device absent the showing of unexpected results.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory

Art Unit: 1792

double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-23 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 4 and 9 of U.S. Patent No. **6,270,618**.

Although the conflicting claims are not identical, they are not patentably distinct from each other because base on a one one-way obviousness-type double patenting rejection test, all the limitations of claims 1, 6-10, 12-14, and 22-23 of the instant application are encompassed by claims 4 and 9 of the patent (see MPEP 804).

With respect to claims 2-5, 11, 15-21, Nakano et al. does not expressly disclose that the susceptor electrode and the chamber wall are shorted at a location shorter than 500 mm from a side wall of the chamber wall and that an angle formed between the metal plate and the bottom wall is less than 45 degrees. However, a prima facie case of obviousness still exists because where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device absent the showing of unexpected results.

Response to Arguments

Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection. With respect to applicant's arguments

Art Unit: 1792

regarding the rejection of the claims due to the defective supplemental reissue oath/declaration, note that the rejection is respectfully maintained because the new supplemental reissue oath/declaration incorporates language that is required such as, the acknowledgement of the filing of the foreign priority, and therefore a signed supplemental reissue oath/declaration needs to be submitted.

Concerning the double patenting rejection, the examiner respectfully submits that a prima facie case of obviousness-type double patenting has been made and has not been effectively argued by the applicant. Additionally, note that, as stated in the advisory action, mailed on 10/31/07, the terminal disclaimer filed on 10/19/07 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent 6,349,670 (**incorrect patent number, see part B below**) has been reviewed and is NOT accepted because:

A) the person who signed the terminal disclaimer is not recognized as an officer of the assignee, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324. An attorney or agent, not of record, is not authorized to sign a terminal disclaimer in the capacity as an attorney or agent acting in a representative capacity as provided by 37 CFR 1.34 (a). See 37 CFR 1.321(b) and/or (c). It would be acceptable for a person, other than a recognized officer, to sign a terminal disclaimer, provided the record for the application includes a statement that the person is empowered to sign terminal disclaimers and/or act on behalf of the organization. Accordingly, a new terminal disclaimer which includes the above empowerment statement will be considered to be signed by an appropriate official of the

Art Unit: 1792

assignee. A separately filed paper referencing the previously filed terminal disclaimer and containing a proper empowerment statement would also be acceptable.

B) the terminal disclaimer does not comply with 37 CFR 1.321(b) and/or (c) because: the application/patent being disclaimed has been improperly identified since the number used to identify the patent being disclaimed is incorrect. The correct number is US Patent 6,270,618.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Luz L. Alejandro whose telephone number is 571-272-1430. The examiner can normally be reached on Monday to Thursday from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
